
TAPE SERVICES

Tapes can easily get damaged if not stored in the proper conditions. Heat, cold and humidity can all affect the condition of your tapes. We offer solutions that will help to preserve your tapes and increase their longevity, but more importantly, retain the information stored on them.

TAPE STORAGE

Media Vaults

Our media vaults, located in our record centres, will store your tapes in optimal conditions, preventing any damage from occurring. Climate controlled by state-of-the-art ventilation and cooling systems, your tapes will be preserved and benefit from increased longevity. Not only are they highly secure with biometric access and monitored 24 hours a day but constructed from the highest grade, fireproof material ensuring your tapes are in the safest place possible, away from threat and protected in the event of a disaster.

TAPE RESTORATION

Transfer and Virtualisation

Our restoration and conversion experts have the capability to deal with any data recovery requests, from ad-hoc emergency requirements, to cataloguing and maintaining a database of historical media. From start to finish, our restoration team will carefully collect your tapes, securely transport them and immediately begin the restoration and conversion process. At the end of the process, they will then be securely delivered in the format of your choice.
